- If you don't have HIV but are at high risk of becoming infected with HIV, talk to your health care provider about pre-exposure prophylaxis (PrEP). PrEP involves taking a specific HIV medicine every day to reduce the risk of HIV infection.

Miss concepts of Spreading of HIV

HIV isn't spread through touch, tears, sweat, saliva, or pee. You can't catch it by:

- Breathing the same air
- Touching a toilet seat or door knob or handle
- Drinking from a water fountain
- Hugging, kissing, or shaking hands
- Sharing eating utensils
- Using exercise equipment at a gym

You *can* get it from infected blood, semen, vaginal fluid, or breast milk.

Mosquitoes spread HIV.

Because the virus is passed through blood, people have worried that they could get it from biting or bloodsucking insects.

When bugs bite, they don't inject the blood of the person or animal they bit before you. Also, HIV lives for only a short time inside them.

She concluded her speech by making us understand the importance of counseling and the need of awareness regarding Aids in youth which is then the future of India.
